

National Latinx AIDS Awareness Day

October 15th

In 2019, there were

249,114

Hispanic/Latinx people living with diagnosed HIV in the U.S.

Not all people who have HIV are aware of their status.

In 2019, it was estimated that

1 in 6 Hispanic/Latinx people living with HIV in the United States *are unaware they have it.*

LIVING WITH HIV OR NOT...

WE'RE FIGHTING THIS TOGETHER

#NLAAD | NLAAD.ORG

79% of HIV diagnoses among Hispanic/Latinx people in 2019 were gay, bisexual, and other men who have sex with men.

Viral suppression is when a person has very low levels of HIV in their blood. Achieving viral suppression helps people living with HIV stay healthy and they cannot pass HIV on to sex partners.

65% of Hispanic/Latinx people living with HIV in the United States in 2019 were virally suppressed.

There are many factors that contribute to a person's risk for HIV and their overall health. Some factors that affect Hispanic/Latinx people's health include:

Language barriers

Unfamiliar with U.S. healthcare system

Discrimination & stigma

Poverty

Lack health insurance

Finding ways to address barriers to accessing quality health services is important for the health of Hispanic/Latinx people and the health of all people.

HIV Among Hispanic/Latinx People in Louisiana

#NLAAD | NLAAD.ORG

Hispanic/Latinx people living with HIV in Louisiana.

How you can prevent HIV transmission

-  If you are living with HIV, take your medications as prescribed to stay healthy and greatly reduce the risk of passing HIV to a partner.
-  If you are HIV-negative, ask your doctor about pre-exposure prophylaxis (PrEP), a daily pill to prevent HIV.
-  Use a condom every time you have sex. Condoms reduce the risk of getting HIV and other sexually transmitted diseases.
-  Know your status. Get tested for HIV. For information on testing locations near you visit:
